

## STUDENT REPORT

# DETAILS

#### Name

Sandhya G

#### **Roll Number**

KUB23MCA017

#### **EXPERIMENT**

#### **Title**

TARGET SUM

#### Description

You are given a list of integers, and your task is to write a function that finds the two numbers in the list that add up to a specific target sum. You need to return the indices of these two numbers.

Write a function that takes a list of Integers and a target sum as input and returns a list of two indices (0-based) of the numbers that add up to the target sum. Assume that there is exactly one solution, and you cannot use the same element twice

#### **Sample Input:**

2 7 11 15

9

#### **Sample Output:**

[0, 1]

#### **Source Code:**

```
def two_sum(nums,target):
num_to_index={}
for i,num in enumerate(nums):
    complement=target-num
    if complement in num_to_index:
        return[num_to_index[complement],i]
    num_to_index[num]=i
    raise ValueError ("No two numbrs add up to the target sum.")
nums=list(map(int,input().split()))
target=int(input())
indices=two_sum(nums,target)
print(indices)
```
